RESEARCH INTERESTS	I am broadly interested in computer vision and machine learning, with a focus on developing models to learn from videos. At a high level, my research interests can be categorized into three aspects: <b>(i)</b> Learning to understand videos. This includes developing algorithms for video recognition/detection/segmentation. <b>(ii)</b> Learning video representations with minimal human supervision (weakly and self-supervised learning from videos). <b>(iii)</b> Learning across modalities (e.g., image, video and audio).
